

The osteopathic profession has developed many treatment modalities and approaches to manipulation. Ligamentous articular strain is the name given by William G. Sutherland, D.O., the founder of cranial osteopathy, to a group of techniques that he used for treating the body outside the core axis of the craniosacral system. The term has since come to refer to a wide variety of techniques that engage the bodys own healing mechanisms in a relatively direct manner. For over thirty years the Dallas Osteopathic Study Group, originally under the tutelage of Rollin Becker, D.O., has been exploring this type of manipulation. Ligamentous Articular Strain is the distillation of their work. The introductory chapters address the historical development of this approach, and review some of its scientific underpinnings. The remaining chapters are devoted to an examination of the body, area by area, from the feet to the shoulders, describing and depicting effective manipulative techniques. Ligamentous Articular Strain provides clear instructions and vivid illustrations which will enable the trained practitioner to quickly gain proficiency in these techniques. It also presents a cogent approach to working with the concepts of the key lesion and the bowstring, first developed by Rollin Becker. In this revised edition, over a hundred new illustrations graphically depict the techniques described in the book, and minor changes have been made to update the text.

The History of Civilization: (V. 7) (1868-69), Colonel Weatherford and His Friends, Gielgud, an actor and his time, Fascisme et nazisme (Memo) (French Edition), The West: its soil, surface, and productions, The Girl Who Gave Birth to Rabbits: A True Medical Mystery, The beginners guide to FPV, Stuck: Aspergers Syndrome and Obsessive-Compulsive Behaviors,
